

MS CLAMP

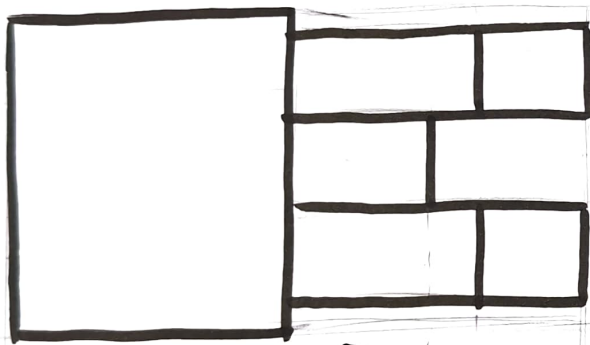

CI BRACKET

Quiz

- ① 1. Top  
2. Side  
3. Front

② First angle projection projects through the object, whereas third angle projection projects to the plane you are "looking" from.

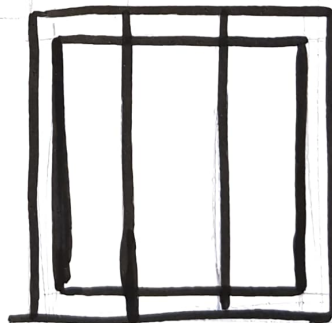

③ No. You only need ~~the~~ the minimum views necessary to convey the shape. 2 would have worked for simpler shapes like the C bracket whereas more angles may be needed for complex shapes with lots of hidden detail.
